

Installing Eclipse On MacAir 1-18-13:

1a. Back up your Mac before doing anything else. I used a brand new 1 TB external hard drive that was specifically formatted for a Mac (HFS). I used Time Machine in Mac to back up computer to external hard drive.

1. Get version of Windows you will be using. I had Windows Professional
2. Have an external USB CD/DVD Drive to install Windows
3. Have an external FAT drive (I used an extra 4GB sd card I had for my writer). Put it into the card reader on your MacAir
4. Follow the instructions found on Apple's website here:

http://manuals.info.apple.com/en_US/Boot_Camp_Install-Setup_Late2010.pdf

I also found this video helpful to watch before I did anything myself, so I could visualize how things would go.

<http://www.youtube.com/watch?v=dx3BZYSZSh4>

5. Partitioning the drive. I did 60 Windows/40 Mac, since I knew this was my work computer and I would be running more Windows than Mac. My hard drive was 256 GB. If I had the 500 GB hard drive I would have done half and half.
6. Download Eclipse version from Eclipse website and install.
7. Problems I have noticed so far:
 - a. quotation marks not working. still need to get with Eclipse on that.
 - b. On my pc, I used SH-tilde (key above tab) for my lockspace. That was not working on the Mac. So I went into User Settings/Edit/Keyboard and added it.
 - c. On my pc, I used the tilde to flip the 's. This also was not working. So I went into User Settings/Edit/Keyboard and edited the 's.
 - d. On a Mac, the Option key plays the audio (ex. Option-J). I wanted to use Command-J. I downloaded a program called Sharpkeys and changed "Special-Left Windows" to "Special-Left Alt. Now I can use the Command key with J and K to start stop audio.
8. Since a Mac has no delete forward, start practicing using fn-delete. That is how I delete forward. Doesn't take too long to master.
9. How to change the On/Off key on a Mac so that it doesn't shut off or put your computer to sleep in windows, but does nothing. I did this because I kept reaching up for the delete key and putting the Mac to sleep while editing. Go into Control Panel. In the search box, type in Power. Click on "Change What the Power Buttons Do." Tell it to do nothing. I also changed my password protection to say "Don't Require A Password." If you worry someone might get into your computer I suppose you would want a password. I didn't.

Now, while you are in the power settings, go ahead and change your power plan so that it never sleeps. I clicked on High Performance and changed both boxes to Never.

10. Change system sounds in windows so they never make a sound. Nothing worse than your computer beeping in the middle of court or a repo. Go to Control Panel. Type in sounds. Click on change system sounds. Change Sound Scheme to "No Sounds" and uncheck "Play Windows Startup sound."
- 11.
12. Turn off your USB Hub Power Save Option:
13. Instructions
14. 1. Click on the "Start" button at the lower left corner of the screen. Select "Control Panel" to open a new window.
- 15.
16. 2
17. Double-click on the icon labeled "System" to launch a separate window. Click on the tab in the new window labeled "Hardware."
- 18.
19. 3
20. Select the button labeled "Device Manager," then click on the plus sign icon next to "Universal Serial Bus Controllers." Right-click on the first "USB Root Hub" icon, and click on "Properties" in the menu that appears.
- 21.
22. 4
23. Click on the tab labeled "Power Management." Click on the box next to "Allow the Computer to Turn off This Device to Save Power" so that no check mark appears in it, then click on the "Ok" button at the bottom of the window.
- 24.
25. 5
26. Right-click on each of the other "USB Root Hub" icons, and follow the same steps to change the power save settings.
- 27.
- 28.
- 29.
- 30.
- 31.
- 32.

33. Show extensions in Windows:
- 34.
35. Show file name extensions
36. A file name extension is a set of characters added to the end of a file name that determine which program should open it. Follow these steps to choose whether Windows displays these file extensions.
- 37.
38. Open Folder Options by clicking the Start button , clicking Control Panel, clicking Appearance and Personalization, and then clicking Folder Options.
- 39.
40. Click the View tab, and then, under Advanced settings, do the following:
- 41.
42. To display file extensions, clear the Hide extensions for known file types check box, and then click OK.
- 43.
- 44.
45. Install VM Fusion
46. Once installed, go into VMware Fusion, Settings, change to 2 core processors to speed it up a bit.

End/End or Start/Start - if the time is not coming out correctly, when I bought this new computer it was putting (Proceedings concluded at 1:30 PM) and I wanted it to say 1:30 p.m., go to the Start button, type in region, and you will see Region and Language come up, click on that, then under the Format tab, click on Additional Settings. Under a.m. symbol and p.m. symbol change the AM and PM to a.m. and p.m. That should fix your macro.
